THE CHALLENGE
To move turbine generator components in a plant containing a combustion turbine generator, steam generators and related equipment.

THE SOLUTION
American Crane provided the customer with a 90/20 Ton Top Running Double Girder Class A Turbine Crane that was custom manufactured specifically for this facility. The crane’s robust design, including a 110 foot span, supports reliable lifts and movements demonstrating its durable construction.

THE RESULT
The special design of this powerhouse crane enables it to safely perform and operate in a tough environment, while protecting some of the most expensive and valuable equipment in the power plant.
